This image shows a full page of blank graph paper. The grid consists of small, equal-sized squares formed by thin, light gray lines. There are 20 columns and 20 rows of squares, creating a total of 400 square units. The background is white, and the grid lines are consistent in thickness and color throughout the entire page.

UPS Systems - Stand-alone

7.1 PowerValue 11T G2 1-10 kVA

The PowerValue 11T G2 with its cost-effective ABB UPS technology makes a high-performance and is now available to market sectors with lower power requirements: Small server rooms, critical lab or industrial equipment, security installations and applications of a similar power class can now profit from one of 12 PowerValue 11T G2 models.

With the most compact online UPS footprint available, the PowerValue 11T G2 features true on-line double conversion. This provides a flexible output frequency and isolates the UPS from upstream disturbances so that the critical load sees only stable, well-regulated, transient-free, pure sine wave AC power.

A rated output power factor up to 1.0 (kVA = kW) means the PowerValue 11T G2 delivers 11 percent more active power than a UPS with a power factor of 0.9. The UPS is optimized for modern IT loads and helps users reduce their energy budget

with its double conversion efficiency of up to 95 percent (up to 98% in ECO mode).

- Low input line disturbances: input PF ≥ 0.995 @ 100 percent linear load – THDi < 3 percent
- Flexible configuration for scalable runtime: UPS and EBMs with and without batteries (long backup)
- Adjustable DC voltage and battery charger current
- Digital charger technology provides accurate charger current setting and reduces charger ripple current
- The UPS is delivered with an inbuilt parallel board and paralleling cables. No additional hardware is required for this installation.

All this with the same guaranteed high availability and quality standards as ABB's higher-power premium UPS models - and at the most attractive entry level price around.

Battery runtime at full nominal load

UPS Systems - Stand-alone

7.2 PowerValue 11 RT

High reliability

- Reliable double conversion topology protects load from all input disturbances
- Batteries can be added or replaced easily
- Reduced recovery time from discharge
- Redundant parallel operation available (6 and 10kVA units)

Low cost of ownership

- Scalable runtime
- High operating efficiency, regardless of loading
- Reduced installation and upgrading costs
- Compact design

Flexible design

- Configurable in tower or rack-mount format
- Rotatable display
- UPS can be connected with up to four parallel battery modules for extended runtime
- Long backup models available
- Full set of accessories and connectivity options

Efficient service concept

- Manually operated maintenance bypass switch (optional)
- Easy set up and maintenance (plug and play)
- User-friendly display
- Hot swap user-replaceable batteries

UPS Systems - Stand-alone

7.3 PowerValue 11 / 31 T

High reliability

- Online double conversion topology
- Parallelable up to four units to provide system redundancy
- Programmed and automated battery tests ensure optimized battery management

Low cost of ownership

- Simple power increase by paralleling up to four units
- High operating efficiency, regardless of loading
- Reduced installation costs
- Compact design

Flexible design

- Different autonomy variations with inbuilt batteries or additional battery cabinets
- Long backup models available
- Single- or three-phase input – adaptable to installation requirements (field configurable)
- Single- or dual-input power source compatible (field configurable)

Efficient service concept

- Integrated manual bypass switch
- Easy to install and maintain
- User-friendly display
- User-replaceable batteries
- Remote monitoring and connectivity options

UPS Systems - Stand-alone

7.4 PowerScale 33 10-50 kVA

PowerScale is an online, double-conversion, VFI (voltage frequency independent) UPS that provides enhanced power protection in a compact format. Its outstanding price / performance delivers the best value for money in its category with

uncompromised system reliability and power availability. PowerScale is available in three cabinet sizes, enabling you to choose the ideal capacity and required autonomy for your critical load.

High reliability

- Online double conversion technology
- Parallelable systems for increased redundancy

Low cost of ownership

- Scalable power and autonomy time
- Small footprint / high power density
- High efficiency at partial and rated loads (up to 95.5%)
- Reduced installation costs
- Ripple-free and temperature controlled battery chargers extend battery life time performance
- Low input harmonic distortion (THDi <3%)

Flexible design

- Available in seven power ratings and three cabinet sizes
- Parallel capacity up to 20 units
- External battery cabinets for extended autonomy

Efficient service concept

- Manually operated maintenance bypass switch
- User-friendly LCD
- Ergonomic design for easy serviceability
- Remote monitoring and connectivity options

7.5 PowerWave 33

96 %
AC-AC efficiency

1.0
Output power factor

Fully scalable
up to 5 MW

ABB has always set global standards in uninterruptible-power-supply solutions. The latest generation of PowerWave 33 is the continuation of ABB's renowned tradition of developing state-of-the-art UPS systems, focusing on delivering the best combination of energy-efficiency and overall power performance in the industry.

Offering maximum power protection, the PowerWave 33 helps you to use less energy and takes up less space, resulting in significant cost savings.

The PowerWave 33's exceptional design meets all modern requirements of building and operating energy-efficient and environmentally friendly data centers. The PowerWave 33 employs transformerless double conversion UPS topology and is available from 60 to 500 kVA.

The PowerWave 33 boasts features and options that cater to customers' needs, including the flexibility to accommodate an increase in power requirements and to provide n+1 parallel redundancy. Easy installation and maintenance form the basis of the core design for this standalone UPS system with front access to electrical connections and fully serviceable components.

Further highlights

- Up to 96 % efficiency in double conversion mode minimizes running costs
- Maximized output active power (kVA = kW)
- Excellent input performance minimizes installation costs
- Power density up to 363 kW / m² minimizes space requirements
- Full front access maximizes system serviceability

Weight sub-rack (without modules / without batteries)	40 kg	56 kg	66 kg	93 kg	20 kg	25 kg	50 kg

The core elements consist of best-in-class hardware and software that respond to diverse customer applications and changing business needs. All DPA UPScale RI components can be mounted directly in any 482.6 mm (19") cabinet of 800 or 600 mm (RI 10, RI 20) depth. Depending on the requirements, mixed equipment population is also possible. DPA UPScale RI is available in seven configurations – with or without inbuilt battery blocks.

Highlights for system integrators

- Rack-independence
- Efficient manufacture of individual solutions with standard products
- High local added value

DPA UPScale RI – safe-swap modularity

The ability to safe-swap modules significantly reduces the system’s mean time to repair (MTTR) and simplifies system upgrades. Thanks to the unique, compact design and low weight (10 kW = 18.6 kg, 20 kW = 21.5 kg) of the DPA UPScale RI modules, inserting additional modules or replacing existing ones during operation is easy and can be performed by a single technician.

MODULES	M 10 or M 20
Maximum output power	10 or 20 kW

Max. number of modules per system	8	12	16	18	20
Max. total system capacity w/o redundancy	160kW	240kW	320kW	360kW	400kW

The ideal solution for small- to medium-sized critical power IT applications

The DPA UPScale ST can be deployed in a variety of small- to medium-sized system architectures. In addition to traditional server load applications, the DPA UPScale ST is ideal to protect critical applications such as building management systems (BMS). Large facilities are often provided with BMS to control and monitor the building’s mechanical and electrical systems such as ventilation, lighting, fire alarms and security. The BMS is designed to create and maintain a safe,

productive and comfortable environment, thus increasing operational efficiency, decreasing the energy consumption and ensuring the safety of personnel and equipment.

The DPA UPScale ST offers clean backup power for sensitive electronic devices (controllers, I/O devices and user interfaces) designed to monitor and control the infrastructure thus avoiding loss of data or damage to equipment.

7.8 DPA 250 S4

The DPA 250 S4 online double conversion modular uninterruptible power supply (UPS) represents the latest technological innovation.

The DPA 250 S4 has a high-efficiency, modular architecture that offers best reliability for environmentally conscious organizations that also need zero downtime and low cost of ownership. The DPA 250 S4 is specially designed for critical, high-density computing environments such as small- to medium-sized data centers.

The DPA 250 S4 sets the standard for the next decade of UPS progress with advanced features such as its transformer-free IGBT converters that feature three-level topology with interleaving controls to enable market-leading efficiency of 97.6 percent for the UPS module. This high efficiency reduces operational costs and minimizes environmental impact.

This modular UPS is based on **decentralized parallel architecture (DPA™)**, where every UPS module is practically its own UPS, having all the essential functional units needed for independent operation. DPA increases system reliability and availability compared to other modular UPS solutions in the market, as there is inherent redundancy between the UPS modules on all functional levels.

- The DPA 250 S4 is specially designed for critical, high-density computing environments such as:
- Small- to medium-sized data centers
 - Commercial buildings and general IT applications
 - Healthcare facilities
 - Railway signaling applications and airports

50 kW power in one UPS module. Truly scalable power - featuring DPA.

250 kW N+1 redundant power. In one UPS frame cabinet.

1,500 kW power in one system. By paralleling up to six frames.

97.6% module efficiency. Top-of-the-market performance.

> 30% reduced power losses. Compared to similar products in the market.

< 10min service time. All it takes to exchange one UPS module.

E & O.E. Terms & Conditions apply.

UPS Systems - Modular

7.9 Conceptpower DPA 500

The Conceptpower DPA 500 boasts the lowest cost of ownership of any UPS system by offering energy efficiency, scalability and ergonomic design to enable easy serviceability.

It can be sized to align closely with prevailing IT requirements, but can be added to incrementally as IT needs grow. This means that you only power and cool what you need. The resulting savings in power usage over the service life of the UPS are substantial.

7 Rack-mounted configurations can be right-sized by inserting or removing 'online-swappable' modules while the systems remain online, enabling power to be added as requirements grow without any footprint penalty. This makes servicing simple as modules can be replaced without powering down.

Together with the excellent efficiency rating (up to 96 %) of the product, all these factors gives the Conceptpower DPA 500 the lowest total cost of ownership of any similar UPS system.

Six frames in parallel can be scaled to provide 3 MW of clean and reliable power.

Sized to fit your needs

Designers often over-specify UPS systems to take account of future demand growth. With the Conceptpower DPA 500, modules can simply be added in parallel to increase the system's total capacity. The Conceptpower DPA delivers power protection from 100 to 500 kW (one to five modules) in a single cabinet. Cabinets can operate in a parallel configuration to build a system of up to 3 MW.

The Conceptpower DPA 500's horizontal and vertical scalability allows:

- Flexible power upgrades and downgrades
- Easy maintenance
- Pay as you grow

Scalable up to 3 MW

Vertical scalability: one to five modules in one single cabinet

UPS Systems - Modular

7.9 Conceptpower DPA 500

GENERAL DATA	
System power range	100 kW - 3 MW
Nominal power / module	100 kW

Available models

Cabinet type	PowerLine DPA 20–40	PowerLine DPA 80	PowerLine DPA 120
Number of modules	1	2	3
Dimension w × h × d	800 × 2200 × 800mm	1200 × 2200 × 800mm	1600 × 2200 × 800mm
Weight in kg (without transformers)	Up to 550 kg	Up to 650 kg	Up to 850 kg

UPS cabinet configuration

- 3ph online double conversion UPS
- Decentralized Parallel Architecture
- Housed in an industrial metal enclosure, IP31, RAL 7035, bottom cable entry
- Halogen free cable
- Forced ventilation with monitored fans
- Input, bypass and battery protection
- Manual bypass switch
- Integrated back-feed protection
- HMI interface with graphical display, control push keys, UPS operating status indication and programmable alarm section
- Communication interfaces: Relay board with 9 programmable outputs and 8 inputs, RS-232 and USB ports

Options

- Input, output, bypass aluminum transformer
- Customized input & output voltages
- Ingress protection IP42
- Top cable entry
- Ventilation frame fans
- Tropicalization and anti-corrosion protection for electrical boards
- Anti-condensator heater
- Lifting eyes
- Control and monitoring (ModBus RS-485, ModBus TCP/IP, SNMP)
- Battery temperature sensor
- Cold start
- Redundant configuration

Industrial UPS Systems

7.11 HiPerGuard

The space and electrical power needed to run a large critical power facility have increased over the past decade. Facilities are now faced with the need for energy efficient and reliable power as it is essential to have clean, continuous power to avoid any major losses

01

ABB's HiPerGuard MV UPS is the next generation of medium voltage UPS intended for multi megawatt power protection. Based on the ZISC architecture, the HiPerGuard MV UPS introduces a flexible solution for higher reliability and efficiency in critical power installations.

01. HiPerGuard MV UPS

Medium voltage

The transition from low voltage (LV) to medium voltage (MV) level is a natural progression of power protection for large critical power installations. The approach offers two main benefits. It increases reliability and reduces costs of the critical power facility build and operation.

Increased reliability is derived from the MV design approach with larger protected load blocks, lower switchgear count and the operating culture of medium voltage systems.

Installing the power protection at the MV level provides the most energy efficient configuration as the lower currents at this voltage result in smaller cables and lower losses, leading to less cooling requirements.

HiPerGuard

HiPerGuard is the next generation of medium voltage UPS intended for multi megawatt power protection. Based on the impedance isolated static converter (ZISC) architecture, the HiPerGuard MV UPS introduces a flexible solution with high reliability and high efficiency for critical power installations.

The HiPerGuard is the most recent addition to ABB's Power Protection product portfolio, creating a complete power protection solution. This increased flexibility removes the need for complex power distribution architectures.

Industrial UPS Systems

7.11 HiPerGuard MV

The HiPerGuard MV UPS's key benefits and advantages create a robust and extremely reliable power protection device for critical facilities.

High Efficiency

- Leading efficiency UPS - 98% at 50% to 100% loading.
- Substantial energy savings during the product lifespan when compared to rotary systems.

Performance

- Performance in line with IEC62040-3 Class 1.
- High fault clearing capability.
- Higher availability due to modular design.

Flexibility

- Scalable power from 2.25MW up to 22.5MW in parallel allows load growth with less stranded capacity, minimizing CAPEX.

Sustainability

- CO₂ emissions reduced thanks to the high efficiency.

Connectivity and monitoring

- Event analysis and waveform capture.
- Remote monitoring and diagnostics.
- ABB Ability™ to increase productivity and safety at lower costs.

Serviceability

- Plug and play power converters.
- Power converters and energy storage at low voltage.
- MTTR typically less than fifteen minutes.
- Comprehensive service log.
- Up to ten years between intrusive maintenance activities.

Demand Response

- System energy storage reserve available for grid support services or peak shaving.

02. Graphical Display Module (GDM)

03. Power Electronics Building Block (PEBB)

Industrial UPS Systems

7.11 HiPerGuard MV - Technical Data

Product Class	7.2 kV IEC	12 kV IEC	15 kV ANSI	24 kV IEC
Rated Voltage ¹	6-6.6 kV	10 – 11 kV	12.47 – 13.8 kV	20 – 22 kV
Rated apparent power	2250 kVA			Single unit
Rated active power	2250 kW			Load power factor 1.0
Hard parallel configuration	Up to 10 units			
Performance				
Efficiency	98% for 50% to 100% loading			Under nominal conditions
Dynamic output performance	In line with IEC62040-3 VI SS 111			
Architecture	ZISC enabled line interactive			
Input				
Voltage tolerance	±10 %			From nominal voltage
Rated frequency	50 Hz/60 Hz			
Power Distribution system ¹	IT, 3-Wire Input			
Output				
Rated frequency	50 Hz or 60 Hz			
Load power factor range	0.9 leading to 0.8 lagging			
Energy Storage				
Energy storage type	Li-Ion batteries			
Energy storage supplier	ABB qualified			
Energy storage autonomy range ¹	15 sec to 15 min			
Interface				
System display	10" touchscreen display			
Display advanced functionality	Waveform capturing			
	Event analysis			
Communication	Trending			
	Comprehensive service log			
Communication	Ethernet			
	Modbus TCP™			

Note:: For other voltages, distribution systems, and autonomy options, please contact ABB.

Industrial UPS Systems

7.12 PCS100 UPS-I

Semiconductor fabrication, test and assembly lines

Flat panel and LCD production lines need to be in operation 24/7 in order to meet today's demands. ABB have installed many UPS-I's, that amount to hundreds of MVA at leading companies like, Samsung and many other LCD manufacturing plants worldwide.

High-speed packaging lines

Voltage variations in high-speed packaging lines cause major disruptions. The PCS100 UPS-I is protecting many high speed packaging lines, including a dairy operation in Washington DC, that produces several million "one time use" plastic coffee creamers per day.

Medical

To ensure that production at multi-billion dollar companies is not brought to a standstill by power failures, voltage sags and other electrical disruptions, power protection is needed. ABB's PCS100 UPS-I is protecting major medical suppliers like B.Braun from such events.

Cable manufacture

Contact manufactures such as NKT's specialist cable factory at Karlskrona, Sweden know the impact of an unplanned shutdown on their operation and invested in two high capacity UPS-I. The UPS-I secure the factory's operations against seasonal weather related utility disturbances along with less predictable voltage events caused by accidents.

Data centers HVAC and servers

PCS100 UPS-I's protects data centers and servers from voltage sags and surges. For example, the PCS100 UPS-I is supporting one of the Swiss government data centers with emergency power supply and a major data center based in Memphis, USA.

Aerospace application

Carbon fiber is extensively used in the aerospace industry. The PCS100 UPS-I protects the production of the carbon fibers, ensuring quality and yield requirements are met. Carbon fiber is the base fiber for all carbon composites.

Industrial UPS Systems

7.12 PCS100 UPS-I

01 PCS100 UPS-I
Single line diagram

The PCS100 UPS-I is a high performance, high efficiency UPS system that ensures protection from power quality events, such as deep sags or short-term outages, enabling continuous power supply to modern industrial processes.

The PCS100 UPS-I uses a modular energy storage and inverter system to supply continuous power during utility events. The PCS100 UPS-I provides flexibility in the choice of energy storage, ultracapacitors or VRLA batteries to suit the required autonomy. Battery systems can deliver autonomy up to 5 minutes. Ultracapacitors provide seconds of protection for short power quality events, which are the most common power quality problems around the world. Ultracapacitors have extremely high power density and long lifetime resulting in a very compact and low maintenance solution.

Harsh electrical environments are often found in modern industry. The PCS100 UPS-I uses a robust high-speed power electronic disconnect switch to connect the load to the utility. The modular inverter construction and fail-safe electromechanical bypass provides the highest system availability. Coupled with the small footprint and easy serviceability, this low maintenance, high efficiency industrial UPS is the solution for all power protection applications.

How it works

When the utility voltage is within a user defined range, the load is supplied directly by the utility. When a sag, surge or outage occurs, the PCS100 UPS-I immediately transfers the load onto its inverter and energy storage.

When the utility voltage returns to within specification the PCS100 UPS-I will seamlessly transfer the load from the inverter back to the utility.

Key benefits

- Robust fail-safe modular industrial design
- Long lifetime energy storage
- Small footprint
- Highest efficiency and availability
- Low maintenance requirements
- Easy serviceability

Key features

- Very high efficiency (99% typical)
- Designed specifically for industrial loads (motors, drives, transformers, production tools)
- Modular design providing high reliability and typically 30 minutes MTTR (mean time to repair)
- Very high fault current capacity
- Advanced ultracapacitor or high discharge rate battery storage
- Generator walk-in algorithm for a controlled transfer of the load to backup generators
- Ratings from 150 kVA to 3000 kVA and voltages
- 208 Vac to 480 Vac

PCS100 UPS-I advantages compared to alternative solutions

- Robust with high availability
- Designed for harsh industrial electrical environments
- Modular design
- Lowest cost of ownership
- Highest efficiency
- Long lifetime energy storage
- Small footprint
- Flexible energy storage options (ultracapacitors or VRLA batteries)

Active Voltage Conditioners

7.13 PCS100 AVC-20

The PCS100 AVC-20 ensures a continual, regulated supply of utility voltage where the electric infrastructure is stressed, unstable or unreliable.

Typical applications

- **Commercial**
 - Hotels and resorts
 - Embassies
 - Sports stadiums
 - Office buildings
 - Entertainment
 - Remote locations
 - Medical equipment
- **Industrial**
 - Manufacturing
 - Assembly
 - Chemical
 - Petrochemical
 - Food and beverage
 - Oil and Gas
 - Printing
 - Pulp and Paper

For further technical information, please refer to the PCS100 AVC-20 Technical Catalogue.

Technical specifications

Utility – Input	
Power range	250 – 3000 kVA
Rated voltage	380 V - 415 V, 3 phase
Performance	
Efficiency	Typically >98%
Voltage variation detection time	250 µs
Voltage regulation time	<20 ms for any voltage deviation within the specification
Continuous regulation	
Undervoltage	-15% (load power factor 1.0) -20% (load power factor 0.75)
Overvoltage	+20%

Active Voltage Conditioners

7.13 PCS100 AVC-20

Designed for use in industrial and large commercial operations in environments where an unstable network or utility voltage affects productivity.

01 PCS100 AVC-20
Single line diagram

Benefits to your business

Increase your operational reliability

- Achieve consistent processes
- Increase the lifetime of your equipment
- Experience fewer equipment malfunctions
- Improve the quality of your products and services
- Reduce your usage of expensive critical back-up systems

A fluctuating voltage supply affects your productivity and the consistency of your operations, leading to a reduction in the quality of your products and services. Fluctuating voltage also leads to increased wear on machinery components, resulting in a greater number of malfunctions and a reduced life expectancy of your equipment. The PCS100 AVC-20's fast, accurate voltage regulation secures your productivity by improving consistency in your operations and reducing the impact of fluctuating voltage on your equipment and production.

Reduce your costs

- Optimize your energy usage
- Improves motor efficiency
- Better use of your resources
- Increase your usage of cheaper utility power

Brownouts, over-voltages and an unbalanced voltage supply cause motors in your equipment and machinery to function inefficiently and can result in poor use of resource, in terms of staff, materials and energy consumption. It can also cause reliance on costly back-up systems, such as diesel generators. The PCS100 AVC-20 ensures a regulated supply of voltage, helping you to streamline your operations and optimize your resource to reduce wasted capacity and improve the return on your operational investment. At the same time, the PCS100 AVC-20 allows you to use utility power, resulting in a cost saving on power generation from captive power plants.

Key product features

- Proven and dependable converter platform with sophisticated control software
- Full range voltage correction completed in 20 milliseconds
- Rugged electrical overload capability
- Modular design providing high reliability and scalability
- Low mean time to repair
- Internal bypass mechanism providing fail-safe operation
- Small footprint with industry leading power density (power per unit volume)
- Touch screen control panel supporting over 15 languages
- Industry-leading efficiency of over 98 percent
- Low cost of ownership due to few moving parts

Active Voltage Conditioners

7.14 PCS100 AVC-40

The PCS100 AVC-40 ensures that equipment receives a clean, continuous flow of power, even during grid disturbances.

- **Electronics industry**
 - Sensitive machinery
 - Clean room control
- **Food and beverage**
 - High speed bottling
 - Packaging lines
 - Dairy processing
- **Automotive**
 - Welding process
 - Coating process
 - Painting process
- **Continuous process**
 - Fibre production lines
 - Film production lines
 - Extrusion process
- **Pharmaceutical**
 - Batch process
 - Climate control
- **Medical**
 - Sensitive medical
 - Imaging equipment

For further technical information, please refer to the PCS100 AVC-40 Technical Catalogue.

Technical specifications

Utility – Input	
Power range	150 – 3600 kVA
Voltage (model specific)	220 V – 480 V, 3-phase
Performance	
Efficiency	Typically >98%
Sag correction response	Initial < 250 µs, complete < ½ cycle
Sag correction	
Three phase sags	60% to 100% for 30 s, 50% to 90% for 10 s
Single phase	45% to 100% for 30 s
Continuous regulation range	±10%
